

Hyperion Health Check

Purpose of a Health Check

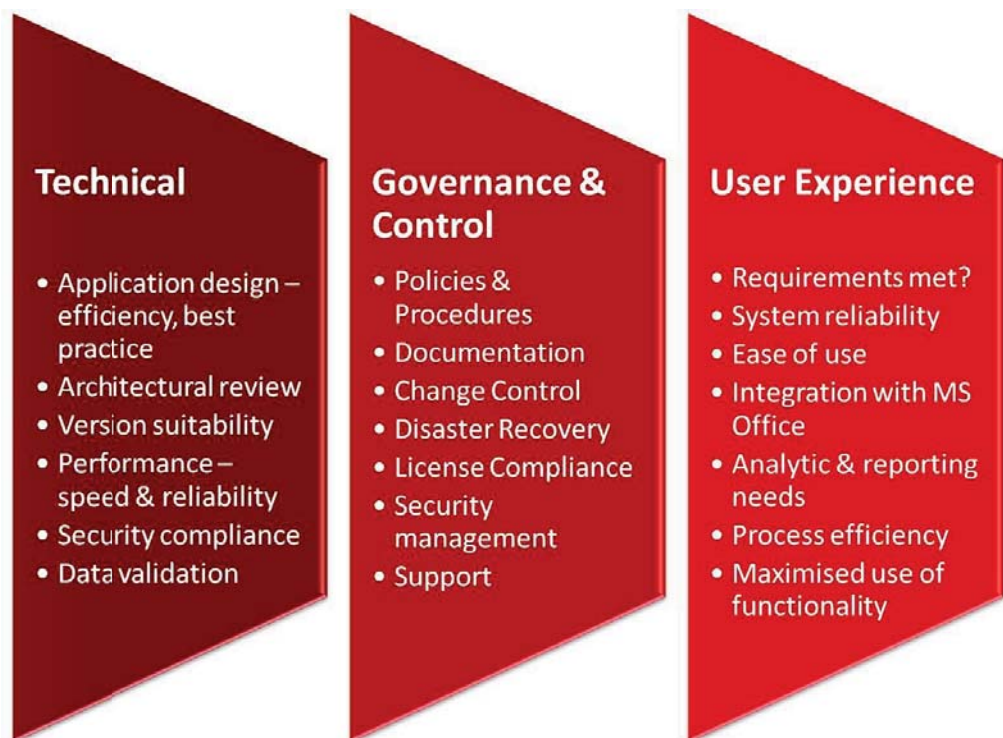

The primary purpose of a health check is to protect and enhance your investment in Hyperion. M-Power has developed a comprehensive review program that will help your organisation answer questions like:-

- Are there any potential problems that need to be addressed in the next 3 months?
- Which areas should we prioritise to make improvements?
- Are we exploiting the available technology to the full?
- How does our solution measure up against best practice?

Scope

The health check combines M-Power’s unique blend of accounting, information technology, business and process expertise and follows our tried and tested methodology. It is completed by one of our certified team of Hyperion experts who follows a series of best practice checks and balances to confirm how the system is performing and to provide recommendations regarding any issues or improvements.

The core functions included within the scope of the Health Check are:

The health check has been developed to be delivered as a regular service. While each health check covers the core components to ensure a complete review of your system, we also work with our clients to agree a key “focus

area” such as reporting or system performance. This helps organisations focus on perceived problems or validate opportunities. The deliverables from the health check are presented at a review meeting with the client to discuss the findings. Our approach reduces risk, ensures success and generates sustainable, long-term value for your business.

The health check program is delivered as a standalone service but most of our clients integrate it with a broader support agreement or outsourcing service.

Why choose M-Power?

M-Power Solutions are Hyperion experts, our experience dates back to the first Hyperion implementation in Australia through to the delivery of some of the largest global roll outs.

Key Deliverables

The health check will provide a detailed report which will include:-

- Traffic light report detailing the health of the key components of your Hyperion deployment
- Detailed list of specific issues/opportunities for improvements with associated recommendations
- Action items for completion prior to next health check

Timeframe/ Costs

The health check service is delivered monthly or quarterly. As you would expect, the first one takes a little longer than rest; but we’re talking days not weeks. Costs will be dependent on the size and complexity of your deployment.
